Dear Students and Parents,
This summer, we encourage you to continue to practice your mathematics at home. Practicing math skills over the summer can keep the brain's pathways for computation and mathematical vocabulary strong.

Please make sure to follow the suggested directions for the best outcomes:

1. Do NOT use a calculator (unless specified). Take time to "grow your brain" and practice your math facts.
2. Show all work! An important aspect of mathematics is being able to communicate the process you use to arrive at your answer. It also provides an opportunity to review your thinking when making corrections to your work.
3. Be neat and organized! Part of success in math is being able to organize your work and keep track of your calculations and steps. Use all the paper you need to neatly show your work.
4. Box your final answers (another organizational strategy).
5. Do not rush! Take advantage of the summer pace and see if you digest more of what you're working on.
6. If you are stuck on a problem, read the example problems provided at the beginning of each exercise. If you are still stuck, check out one of the math websites listed below.
7. Check your work! If you got an incorrect answer, go back and try to figure out your error. Correcting your work and figuring out where you went wrong is monumental in the learning process.
